"This select catalog lists National Archives and Records Administration (NARA) microfilm publications of records that relate to the history of U.S. diplomatic relations."--Introduction.

The incomplete state in which many Coptic writings have survived makes them difficult to assess, and the text studied in this book is no exception. Preserved in two fragmentary manuscripts, the Berlin-Strasbourg-Apocryphon - previously known as the Gospel of the Savior - has been wrongly identified as a second-century gospel which was bypassed in the formation of the Christian canon. Alin Suci demonstrates that this misunderstanding of the text derives from an insufficient knowledge of Coptic literature. Rather, the Berlin-Strasbourg Apocryphon is one of the numerous "apostolic memoirs," a peculiar genre of Coptic literature which consists of writings allegedly written by the apostles, often embedded in sermons attributed to famous church fathers. These texts were composed following the Council of Chalcedon, as part of the attempt of the emerging Coptic church to mold its identity after the schism.

This text contains sufficient material for a single semester core course in electric machines and energy conversion, while allowing some selectivity among the topics covered by the latter sections of Chapters 3-7 depending on a school's curriculum. The text can work for either a course in energy design principles and analysis with an optional design project, or for a capstone design course that follows an introductory course in energy device principles. A unique feature of "Electric Machines: Analysis and Design Applying MATLAB" is its integration of the popular interactive computer software MATLAB to handle the tedious calculations arising in electric machine analysis. As a result, more exact models of devices can be retained for analysis rather than the approximate models commonly introduced for the sake of computational simplicity.

The continuing expansion world-wide of the composites industry ensures a warm welcome for the second edition of this popular and successful directory and databook, first published in 1993. This edition has been completely revised and updated to include many new companies and new and improved thermoset resin systems, as well as major and important changes in the whole manufacturer/supplier picture. As in the first edition, the initial directory section of the book includes a comprehensive contact listing of all relevant companies, together with some basic explanations of thermoset chemistry. The databook section has been completely redesigned to allow more resin description and property tabulation as well as a more reader-friendly, useful layout. In its new edition, the book will continue to be an essential reference throughout the composites industry as well as to academics and students of materials science.

Designed for teaching astrophysics to physics students at advanced undergraduate or beginning graduate level, this textbook also provides an overview of astrophysics for astrophysics graduate students, before they delve into more specialized volumes. Assuming background knowledge at the level of a physics major, the textbook develops astrophysics from the basics without requiring any previous study in astronomy or astrophysics. Physical concepts, mathematical derivations and observational data are combined in a balanced way to provide a unified treatment. Topics such as general relativity and plasma physics, which are not usually covered in physics courses but used extensively in astrophysics, are developed from first principles. While the emphasis is on developing the fundamentals thoroughly, recent important discoveries are highlighted at every stage.
