The solution to each problem assumed that you already know the basic concepts and principles in Engineering Mechanics. Engineering Mechanics is divided into two major parts, namely Statics and Dynamics. Statics is primarily concerned to system of forces applied to body at rest. It includes the following topics: resultant of force system; equilibrium of force system; cables; friction; trusses; frames; centroid; center of gravity; and moment of inertia.

Engineering Mechanics Combined Statics And Dynamics ...

Statics mainly deals with the forces acting on stationary bodies/body. All the forces acting are in equilibrium (ie. Moment about a point is ZERO ; Summation of forces along X and Y direction is ZERO) Dynamics is the study of forces acting on moving bodies/body. Application of forces when they are in motion. (here moment and displacement are NOT ZERO)

Statics is the branch of mechanics that is concerned with the analysis of loads (force and torque, or "moment") acting on physical systems that do not experience an acceleration ($a = 0$), but rather, are in static equilibrium with their environment. The application of Newton's second law to a system gives:
