4G LTE EPC (Evolved Packet Core) is a framework for providing converged voice and data on a 4G Long-Term Evolution (LTE) network. 2G and 3G network architectures process and switch voice and data through two separate sub-domains: circuit-switched (CS) for voice and packet-switched (PS) for data. EPC is a whole new core network with a flat, all-IP based architecture.

communicate with HSS via 2G/3G protocols or 4G protocols. This is the most complex product we developed.

LTE EPC is the Core Network of LTE networks.

A detailed description of the nuts and bolts of EPC that are required to really get services up and running on a variety of operator networks. An in-depth overview of the EPC architecture and its connections to the wide variety of network accesses, including LTE, LTE-Advanced, WCDMA/HSPA, GSM, WiFi, etc.
