To take care of a black eye: Apply a cold compress soon after the injury. Using gentle pressure, place a cold pack or a cloth filled with ice to the area around your eye. Take care not to press on the eye itself. Apply cold as soon as possible after the injury to reduce swelling. Repeat several times a day for a day or two. Look for blood.

~~Black eye: First aid—Mayo Clinic~~

A hematoma can result from an injury to any type of blood vessel (artery, vein, or small capillary). A hematoma usually describes bleeding which has more or less clotted, whereas a hemorrhage signifies active, ongoing bleeding. Hematoma is a very common problem encountered by many people at some time in their lives.

~~Hematoma: Types, Symptoms, Pictures, Causes & Treatments~~

Auricular hematomas are caused by direct blunt trauma to the anterior auricle, occurring most commonly in wrestlers, boxers, and rugby players. Trauma can cause a hematoma that separates the auricular perichondrium from the underlying cartilage and interrupts blood vessels that nourish the cartilage. If the perichondrium and its vessels are not reattached to the cartilage, there can be scarring and permanent deformity of the cartilage (cauliflower ear).
