The various cooling liquids which circulate the engine are themselves cooled by sea water. The usual arrangement uses individual coolers

Online Library Marine Engine Cooling System

for lubricating oil, jacket water, and the piston cooling system, each cooler being circulated by sea water. Some modern ships use what is known as a 'central cooling system' with only one large sea-water-circulated cooler.

Marine Engine Cooling System Sketch

Page 29/36

Online Library Marine Engine Cooling System

Sketch Because it is at a higher temperature than the cooling water used for other purposes (known as the LT cooling), the water for cooling the engine is known as the HT (High Temperature) cooling water. Cooling can be achieved by using a dedicated cooler or by mixing in some of the water from

Online Library Marine Engine Cooling System

the LT cooling circuit. The LT cooling water is then cooled in the sea water coolers.
