Vi piacerebbe fare la dichiarazione dei redditi online o fondare un'azienda nel giro di pochi minuti? In Estonia è già possibile. Perché allora alcuni enti statali usano ancora software risalenti agli anni Sessanta e non prevedono di aggiornarli? Quando a ottobre 2013 il sito HealthCare.gov è stato messo online, molti lo hanno definito una catastrofe. Dal punto di vista della pubblica amministrazione statunitense, però, il sito ha rappresentato un punto di svolta, evidenziando la necessità che le istituzioni pubbliche raggiungessero l'eccellenza nel campo del digitale e ispirando centinaia delle migliori e più brillanti menti tecnologiche a radunarsi a Washington con la speciale missione di modernizzare la

pubblica amministrazione. Come si fa a prendere una pubblica amministrazione interamente basata su schemi analogici tipici dell'era industriale e a riprogettarla in modo che diventi interamente digitale? Bisogna riuscire a concepirne una totalmente nuova. Provate a immaginare un sistema carcerario che impiega tecnologie digitali per far rientrare nella società, in maniera rapida e sicura, i colpevoli di reati non violenti. Provate a immaginare un'assistenza sanitaria che garantisce a ogni assistito una user experience personalizzata. Oggi disponiamo degli strumenti digitali (cloud computing, dispositivi mobili, analisi) e del talento necessari a implementare davvero una trasformazione reale. Questo libro rappresenta la guida perché questo possa essere messo in pratica e per arrivare ad avere una pubblica amministrazione fondata sul digitale.

The implementation of Enterprise Networks or e-Networking is of paramount importance for organisations. Enterprise-wide networking would warrant that the components of information architecture are organised to harness more out of the organisation's computing power on the desktop. This would also involve establishment of networks that link the various but important subsystems of the enterprise. Our firm belief is that in order to gain a competitive edge the organisations need knowledge and sound strategy. This conviction is particularly true today, considering the pressures from international competition, environmental concerns and complicated ethical issues. This book, entitled *A Manager's Primer on e-Networking*, negotiates the hyper dimensions of the Internet through stories from myriad of Web sites with its fluent presentation and simple but chronological organisation of topics highlighting numerous opportunities and providing a solid starting point not only for inexperienced entrepreneurs and managers but anyone interested in applying information technology in the business. I sincerely hope the book will help as well many small and medium size companies and organisations to launch corporate

Software architecture is a primary factor in the creation and evolution of virtually all products involving software. It is a topic of major interest in the research community where pronusmg formalisms, processes, and technologies are under development. Architecture is also of major interest in industry because it is recognized as a significant leverage point for manipulating such basic development factors as cost, quality, and interval. Its importance is attested to by the fact that there are several international workshop series as well as major conference sessions

devoted to it. The First Working IFIP Conference on Software Architecture (WICSA1) provided a focused and dedicated forum for the international software architecture community to unify and coordinate its effort to advance the state of practice and research. WICSA 1 was organized to facilitate information exchange between practising software architects and software architecture researchers. The conference was held in San Antonio, Texas, USA, from February 22nd to February 24th, 1999; it was the initiating event for the new IFIP TC-2 Working Group on Software Architecture. This proceedings document contains the papers accepted for the conference. The papers in this volume comprise both experience reports and technical papers. The proceedings reflect the structure of the conference and are divided into six sections corresponding to the working groups established for the conference.
