Nervous System | Biology Quiz - Quizizz

Your nervous system has lots of protection. Your brain is guarded by your skull, and your spinal cord is shielded by small bones in your spine (vertebrae) and thin coverings (membranes). They're...

Nervous System (Human Anatomy): Functions, Organs, Diseases

Organisms that possess a nervous system are capable of much more complex behaviour than are organisms that do not. The nervous system, specialized for the conduction of impulses, allows rapid responses to environmental stimuli. Many responses mediated by the nervous system are directed toward preserving the status quo, or homeostasis, of the animal. Stimuli that tend to displace or disrupt some part of the organism call forth a response that results in reduction of the adverse effects and a ...

nervous system | Definition, Function, Structure, & Facts ...

The nervous system is the body's main communication system; it gathers, synthesizes, and uses data from the environment. The most basic unit of the nervous system is the neuron, which serves as both a sensor and communicator of internal and external stimuli.

Answered: How does the autonomic nervous system... | bartleby

The nervous system is made of two groups: the central nervous system and peripheral nervous system. The central nervous system, also known as the CNS, includes both the spinal cord and the brain. They are the control center of the body. These are the parts of the body in which you make decisions and evaluate the world. The peripheral nervous system, or PNS, consists of sensory nerves and organs in the body.
