Adam Roberts's *Twenty Trillion Leagues Under the Sea* revisits Jules Verne's classic novel in a collaboration with the illustrator behind a recent highly acclaimed edition of *The Hunting of the Snark*. It is 1958 and France's first nuclear submarine, *Plongeur*, leaves port for the first of its sea trials. On board, gathered together for the first time, are one of the Navy's most experienced captains and a tiny skeleton crew of sailors, engineers, and scientists. The *Plongeur* makes her first dive and goes down, and down and down. Out of control, the submarine plummets to a depth where the pressure will crush her hull, killing everyone on board, and beyond. The pressure builds, the hull protests, the crew prepare for death, the boat reaches the bottom of the sea and finds nothing. Her final dive continues, the pressure begins to relent, but the depth gauge is useless. They have gone miles down. Hundreds of miles, thousands, and so it goes on. Onboard the crew succumb to madness, betrayal, religious mania, and murder. Has the *Plongeur* left the limits of our world and gone elsewhere?

Originally published: Great Britain: Gollancz, 2014.

An interstellar craft is decelerating after its century-long voyage. Its destination is V538 Aurigae ?, a now-empty planet dominated by one gigantic megastructure, a conical mountain of such height that its summit is high above the atmosphere. The ship's crew of five hope to discover how the long-departed builders made such a colossal thing, and why: a space elevator? a temple? a work of art? Its resemblance to the mountain of purgatory lead the crew to call this world Dante. In our near future, the United States is falling apart. A neurotoxin has interfered with the memory function of many of the population, leaving them reliant on their phones as makeshift memory prostheses. But life goes on. For Ottoline Barragão, a regular kid juggling school and her friends and her beehives in the back garden, things are about to get very dangerous, chased across the north-east by competing groups, each willing to do whatever it takes to get inside Ottoline's

private network and recover the secret inside. Purgatory Mount, Adam Roberts's first SF novel for three years, combines wry space opera and a fast-paced thriller in equal measure. It is a novel about memory and atonement, about exploration and passion, and like all of Roberts's novels it's not quite like anything else.

Adam Roberts turns his attention to answering the Fermi Paradox with a taut and claustrophobic tale that echoes John Carpenters' *The Thing*. Two men while away the days in an Antarctic research station. Tensions between them build as they argue over a love-letter one of them has received. One is practical and open. The other surly, superior and obsessed with reading one book - by the philosopher Kant. As a storm brews and they lose contact with the outside world they debate Kant, reality and the emptiness of the universe. They come to hate each other, and they learn that they are not alone.

Adam Roberts' new novel is a terrifying vision of a near future war - a civil war that tears the UK apart as new technologies allow the world's first truly democratic army to take on the British army and wrest control from the powers that be. Taking advances in modern communication and the new eagerness for power from the bottom upwards, Adam Roberts has produced a novel that is at once an exciting war novel and a philosophical examination of war and democracy. It shows one of the UK's most exciting and innovative literary voices working at the height of his powers and investing SF with literary significance that is its due.

Retells the adventures of a French professor and his two companions as they sail above and below the world's oceans as prisoners on the fabulous electric submarine of the deranged Captain Nemo.

Describes the state of postwar development policy in Africa that has channeled billions of dollars in aid but failed to either reduce poverty or increase growth, offering a hopeful vision of how to address the problem.

Russia, 1946, the Nazis recently defeated. Stalin gathers half a dozen of the top Soviet science fiction authors in a dacha in the countryside somewhere. Convinced that the defeat of America is only a few years away, and equally convinced that the Soviet Union needs a massive external threat to hold it together, to give it purpose and direction, he tells the writers: 'I want you to concoct a story about aliens poised to invade earth ... I want it to be massively detailed, and completely believable. If you need props and evidence to back it up, then we can create them. But when America is defeated, your story must be so convincing that the whole population of Soviet Russia believes in it - the population of the whole world!' The little group of writers gets down to the task and spends months working on it. But then new orders come from Moscow: they are told to drop the project; Stalin has changed his mind; forget everything about it. So they do. They get on with their lives in their various ways; some of them survive the remainder of Stalin's rule, the changes of the 50s and 60s. And then, in the aftermath of Chernobyl, the survivors gather again, because something strange has started to happen. The story they invented in 1946 is starting to come true ... A typically mind-blowing SF novel from one of the genre's literary stars.
