The animal releases the carbon back into the air by the process of cellular respiration. Activity A: Carbon pathways Get the Gizmo ready: Click Reset. Introduction: Earth can be divided into four systems. The atmosphere is the air above Earth's surface. The hydrosphere is composed of all of Earth's water. The geosphere is the rocky, non-living part of Earth.

Gizmo Carbon Cycle SE.pdf - Name Skyleigh Miller Date ...

Correct Answer: A – Evaporation and condensation. Explanation: The Sun's energy causes water at the surface of the ocean to warm up and evaporate. Warm air saturated with water vapour rises up into the atmosphere, where it is cooled at higher elevations. The cooling of the saturated air causes water vapour to condense into tiny water droplets and form a cloud. (Gizmo, 2013)

explore the different paths water takes as it moves from Earth’s surface to the atmosphere and back.

Gizmo - Water Cycle.docx - Name Date Student Exploration ...

Earth's water is always in movement, and the natural water cycle, also known as the hydrologic cycle,
describes the continuous movement of water on, above, and below the surface of the Earth. Water is
always changing states between liquid, vapor, and ice, with these processes happening in the blink of
an eye and over millions of years.
